

# Human MMP-8 Protein, His Tag (active enzyme)

Catalog # MM8-H52H7

BIOSYSTEMS  
**Acro**  
Surprise Inside!

## Synonym

CLG1 Protein, HNC Protein, MMP-8 Protein, PMNL-CL Protein,

## Source

Human MMP-8 Protein, His Tag (MM8-H52H7) is expressed from human 293 cells (HEK293). It contains AA Phe 21 - Gly 262 (Accession # [P22894-1](#)). It needs to be activated by agents such as APMA in vitro to have hydrolytic activity.

Predicted N-terminus: Phe 21

## Molecular Characterization

MMP-8(Phe 21 - Gly 262)  
P22894-1 Poly-his

This protein carries a polyhistidine tag at the C-terminus.

The protein has a calculated MW of 29.0 kDa. The protein migrates as 38-55 kDa when calibrated against [Star Ribbon Pre-stained Protein Marker](#) under reducing (R) condition (SDS-PAGE) due to glycosylation.

## Endotoxin

Less than 1.0 EU per µg by the LAL method.

## Purity

>90% as determined by SDS-PAGE.

## Formulation

Supplied as 0.2 µm filtered solution in 50 mM Tris, 150 mM NaCl, pH 8.0 with trehalose as protectant.

Contact us for customized product form or formulation.

## Shipping

*This product is supplied and shipped with dry ice, please inquire the shipping cost.*

## Storage

*Please avoid repeated freeze-thaw cycles.*

This product is stable after storage at:

- The product MUST be stored at -70°C or lower upon receipt;
- -70°C for 3 months under sterile conditions.

## SDS-PAGE

Human MMP-8 Protein, His Tag on SDS-PAGE under reducing (R) condition.

The gel was stained with Coomassie Blue. The purity of the protein is greater than 90% (With [Star Ribbon Pre-stained Protein Marker](#)).

# Human MMP-8 Protein, His Tag (active enzyme)

Catalog # MM8-H52H7

BIOSYSTEMS  
**Acro**

Immobilized Human MMP-8 Protein, His Tag (Cat. No. MM8-H52H7) at 1 µg/mL (100 µL/well) can bind various dilution ratio of Anti-MMP8 Polyclonal Antibody (Routinely tested).

## Bioactivity

Measured by its ability to cleave the fluorogenic peptide substrate, Mca-PLGL-Dpa-AR-NH<sub>2</sub>. The specific activity is >300 pmol/min/µg (QC tested).

## Background

Matrix metalloproteinase-8 (MMP-8) also known as neutrophil collagenase and CLG1, is a member of matrix metalloproteinases (MMPs) family, which degrade components of the extracellular matrix (ECM) and play essential roles in various physiological processes as well as pathological processes. MMP-8 may affect the metastatic behavior of breast cancer cells through protection against lymph node metastasis, underlining the importance of anti-target identification in drug development. MMP-8 in the tumor may have a protective effect against lymph node metastasis.

## Clinical and Translational Updates
